EVERGREENS

Door-step Planting

Evergreens dignify the doorway entrance and at the same time establish a feeling of warmth and welcome so desirable at the entrance.

During the winter they form a most attractive part of one's planting, and during the summer their splendid colors and varying forms add a note of interest to even the most elaborate landscape effect.

Prices listed are for evergreens securely balled and burlapped, as indicated by the abbreviations, B&B. "X" means number of times transplanted and root-pruned.

Note: All of our Junipers are 3X, B&B, unless otherwise indicated.

SPREADING JUNIPERS

HILLBUSH JUNIPER—Grows naturally in a Savin shape. By trimming may easily be developed into perfect balls. Deep, rich green foliage all seasons.

ROSES

The Queen of All Flowers

The rose is unquestionably the most popular of all flowering plants. Its fragrant blooms with varying form and color are unsurpassed by other plants.

Our roses are grown especially to meet the rugged climatic conditions of the Northwest. They are hardy, field grown, of the largest two-year-old grade, full of vigor and life, ready to bloom for you just a few weeks after planting.

Roses should be pruned back heavily when planted. The success of their growth the first year depends largely on the pruning given them at this time. All roses on these pages, require winter protection, except the Rugosas.

This year we have expanded our consistently fine selection of roses to include American Rose Society winners for 1952, as well as other fine new ones. These are the highest grade, 2 year old, field grown plants.

MILORGANITE Fertilizer for a BEAUTIFUL, LUXURIANT LAWN.

A NATURAL ORGANIC FOOD— • Milorganite is a natural, unadulterated organic plant food. It contains more of the "basic" fertilizer elements than good old Barnyard Manure, and is richer in the vital "trace elements," also.

EFFECTS ON GROWTH ARE LONG LASTING— • Soluble fertilizers may act more *quickly* than Milorganite because they are rapidly assimilated by plants. Usually this is a *disadvantage* rather than an advantage . . . because the effect on plant growth is short-lived. Furthermore, too rapid growth weakens plant structures. MILORGANITE promotes *steady, healthy, uniform growth* because its water-insoluble organic nitrogen is released slowly, and is converted into available plant food as needed. That's why lawns fed with Milorganite stay green longer.

HIGH IN PURITY — NON-BURNING— • Scientific process of manufacture assures high purity and high content of plant food elements. Milorganite has no objectionable odor, is free of weed seeds and harmful bacteria . . . yet stimulates development of *vitality needed* soil micro-organisms which convert insoluble soil nutrients into *available* and usable compounds.

Price: 100-lb. bag, \$4.75; 50-lb. bag, \$2.85; 25-lb. bag, \$1.70.
